## Log of changes

Revision	Description	Files Revised	Items Revised
Revision 1	We have revised our estimate of the effect of COVID-19 on social security spending. This does not affect our spending forecast, only the proportion of the change in the forecast attributed to COVID-19. We overestimated the COVID-19 share of the change in spending by £34 million in 2020-21, by £44 million in 2021-22 and underestimated it by £22 million in 2024-25.
